

I. PATIENT DEMOGRAPHIC PROFILE

PATIENT STAY ID:	39553978	ETHNICITY / RACE:	WHITE
AGE / GENDER:	52 yrs / FEMALE	INSURANCE PLAN:	Medicaid
ADMISSION TYPE:	EW EMER.	MARITAL STATUS:	WIDOWED

II. MORTALITY RISK CLINICAL ASSESSMENT (24-HOUR INTERCEPT)

19.83%

In-Hospital Mortality Risk

SEVERITY LEVEL BANDS:

HIGH RISK

Logistic Regression early-warning pipeline

III. DYNAMIC EXPLAINABLE AI (XAI) BEDSIDE DRIVERS

High-risk factors increasing mortality risk include Potassium (Min) (+37.9% clinical risk adjustment), Diastolic BP (Max) (+21.2% clinical risk adjustment), and Potassium (Mean) (+20.6% clinical risk adjustment). Stable physiological factors mitigating risk include Systolic BP (Max) (-52.9% clinical risk adjustment), Gender (-16.6% clinical risk adjustment), and Systolic BP (Std) (-15.1% clinical risk adjustment).

IV. ACTIONABLE CLINICAL TREATMENT ADVISORY GUIDELINES

- **Renal Perfusion****: Elevated Blood Urea Nitrogen (BUN) flagged. Recommend renal panel review and fluid balance indices evaluation.
- **Hemodynamics****: Low mean blood pressure observed. Consider arterial lines review or vasoactive perfusion support.
- **Airway Status****: Elevated/Depressed Respiratory Rate flagged. Evaluate bedside ventilation parameters or distress patterns.
